Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 3683

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yagi et al. in view of Griffin.

Yagi et al. Show a braking system having brake pedal 1, master cylinder 2, pressure sensor 16, accumulator 7c, proportional controller 51, auxiliary controller (at 50) and wheel brake 3. The claimed invention differs from Yagi et al. only in the inclusion of two check valves. Griffin show check valves 10, 11 in line between the master cylinder and the brakes. It would have been obvious to one of ordinary skill in the art to have included a check valve circuit, such as shown by Griffin, in line with the master cylinder so as to raise the brake pressure above the boiling point for high-temperature brakes as taught by Griffin, see column 2, lines 25-35.

Re- claim 2, note spring 57 in Yagi et al.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Oyama, Ganzel and Kambe et al. show brake systems.
